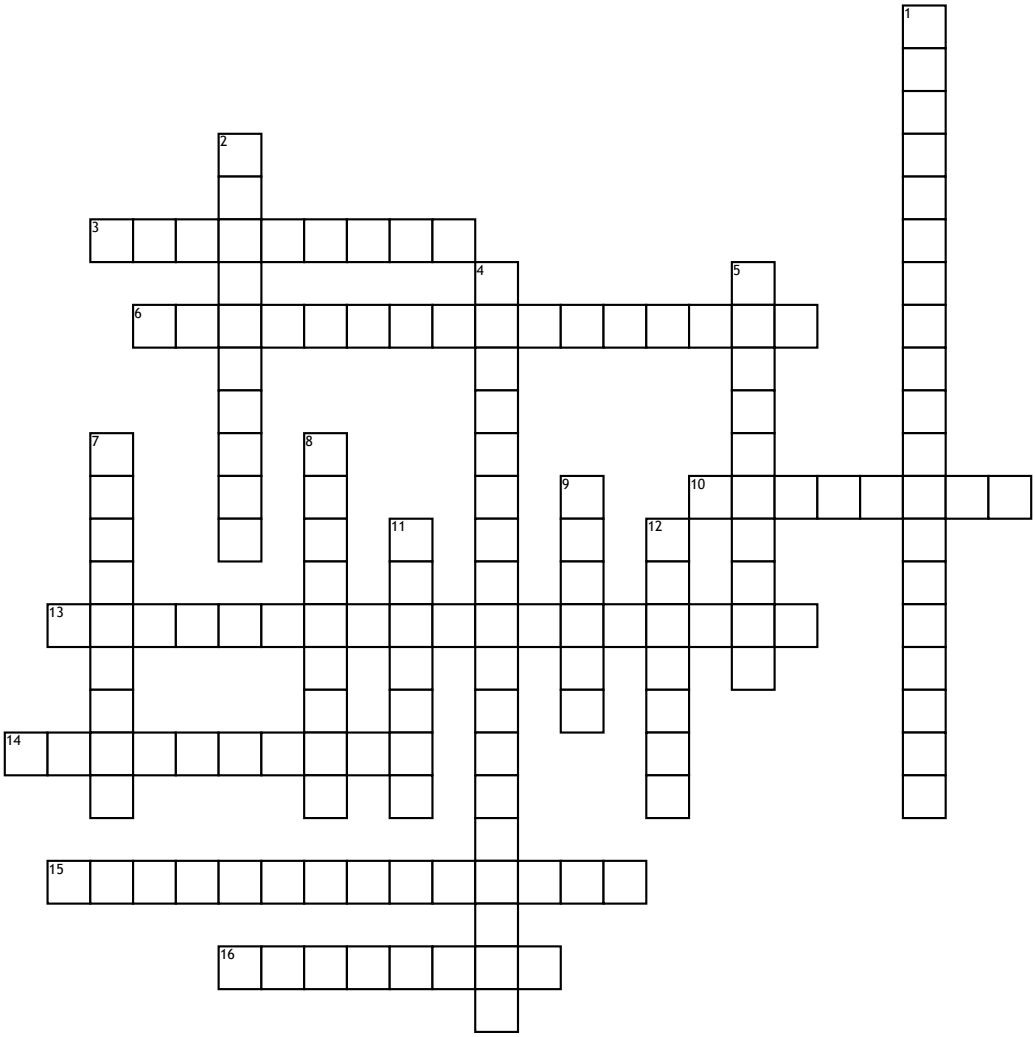
Name: _____ Date: _____

Biology Review



Across

3. Simple cell lacking membrane bound structures

6. Organisms with flavorable characteristics survive and reproduce, passing on the variation

10. Grouping of objects or information based on similarities

13. States that older rock layers are below younger rock layers

14. Complex cells with membrane-bound structures

15. Grouping and naming of organisms based on shared characteristics

16. A mistake in an organisms DNA that results in a variation of a population

Down

1. One parent produces identical offpsring, no fusion of reproductive cells (gametes)

2. An inherited characteristics that increases an organism's chance of survival

4. Reproduction that includes the fusion of reproductive cells (gametes)

5. A group of individuals of the same species that live in the same area

7. The occurrence of genetic differences within a population (ex. different color)

8. Gradual change in a species through adaptations over time

9. Physical evidence of an organism that lived long ago

11. A group of organisms that can breed and produce fertile offspring

12. The organism's capacity to survive and reproduce in an environment
