# 14 Cell Organelles

**Across**

- 5. I make proteins, what I am?
- 8. I am in charge of the production of protein and I am covered in ribosomes, what am I?
- 11. This organelle acts as the brain and controls what a cell does.
- 13. I Recycle cell parts and break down large food molecules into smaller ones.
- 14. It takes energy from the sunlight to make food for the cell.

**Down**

- 1. This organelle is the storage area for food, water, and waste.
- 2. This is the structural framework that the organelles attach to.
- 3. This organelle acts as a digestive system it breaks down nutrients and turns it into energy.
- 4. I gather simple molecules and combine them to make a much more complex molecule, what am I?

- 6. This organelle lets things in and out of the cell, and keeps bad things out.
- 7. This is a jelly like substance that other organelles are in.
- 9. This organelle makes lipids and steroids.
- 10. This is the transport.
- 12. Protects and supports plant cell and allows things to move in and out of the cell.
