

4-4: deforming the Earth's crust

Across

- 4.** the sinking of regions of the Earth's crust to lower elevations
8. the rising of regions of the Earth's crust to higher elevations
10. The most common folds
11. stress that occurs when forces act to squeeze an object
12. A type of common fold
14. highest mountain ranges in the world are made out of

15. A set of deep cracks that forms between tectonic plates that are pulling away from each other

Down

- 1.** Another type of common fold
2. the way the shape of the rock changes because of this stress
3. A two sub-layers of earth crust that moves
5. how can a material bend at one time and break at another

6. the bending of rock layers due to stress

7. the amount of force per unit area on a given material

9. stress that occurs when forces act to stretch an object

13. a break in the body of rock along which one block slides relative to another
