

9 Largest Phylum

Across

- 4. A toxic waste that must be gotten rid of by an animals body?
- 12. Attached and non-moving?
- 13. phylum that molts for growth?
- 15. The arrangement of body parts around a central plane or axis?
- 16. Tiny, hair-like cellular extensions
- 17. outer germ layer?
- 19. The central cavity of the blastula?
- 20. occurs when the body can't be divided into similar sections?
- 22. Occurs when similar body parts are arranged around a central point?

- 23. A sac-like cavity with only one opening which functions to digest food as well as circulate nutrients?

Down

- 1. segmentation is found in more ?
- 2. Occurs inside the body of the female and larger numbers of sperm and eggs are produced?
- 3. phylum with the simplest skeleton?
- 5. Are animals unicellular or multicellular?
- 6. What is the larvae of mollusks called?
- 7. Tissue that provides energy for movement?

- 8. Phylum with one body opening into the gastrovascular cavity?

- 9. fertilized egg that all animals form from?
- 10. Most animals with radial symmetry are?
- 11. This animal has fluid-filled internal cavities giving them skeletal support?
- 14. The inner germ layer?
- 18. Cup-shaped structure with 2 cell layers is called the?
- 21. The internal body cavity that is lined with mesoderm?
