

9th Grade Science; End of the Year

Across

- 3. Humans and their closest ancestors
- 6. Rigid outer portion of Earth containing the crust and upper mantle
- 11. Liquid portion of Earth
- 12. Solid portion of the Earth
- 13. Organisms that no longer live on Earth
- 14. Rock made directly from molten material
- 15. Layer that contains the ozone

- 18. Rock made from previously existing rock
- 19. shallow water area found next to the continent
- 20. Rock made from heat and pressure applied to other materials
- 21. Point inside Earth where seismic waves begin

Down

- 1. Part of Earth where life exists
- 2. Salt content of ocean water
- 4. Process by which evolution occurs

- 5. causes fluids to bend clockwise north of the equator
- 7. Point on Earth's surface where rocks break and move during an earthquake
- 8. Upper layer of mantle that flows like a plastic
- 9. Gaseous layer above the solid Earth
- 10. Walk on 2 legs
- 16. Brings cool deep water up towards the surface with food material
- 17. Move east to west adjacent to the equator
