

ANSC 102 Reproductive System

Across

4. The process of giving birth
 8. The sex organs that produce gametes, examples are the testes in males and the ovaries in females.
 9. Muscular sac that holds and protects the testes. It's main role is temperature regulation
 11. The male sex hormone. The testes produce this hormone
 12. The general term for birthing difficulty
 13. The period when a female is receptive to mating. Also known as being in heat.

14. A reproductive issue in cattle when twins are conceived. If a bull and heifer are born, the female becomes sterile.

Down

1. An early stage in the development of the embryo. It forms when the zygote begins cell division.
 2. Ligament in female that attaches the uterus to the pelvis
 3. Where maturation and storage of sperm take place
 5. A reproductive issue where the testes do not descend and remain in the abdominal cavity

6. Ovarian structure that maintains pregnancy by secreting the progesterone hormone. Another name for this structure is "yellow body."

7. The process of transferring fertilized embryos from a donor female to a recipient female
 10. The first milk given by female after birth which filled with nutrients and immunity elements
