

Name: _____

Date: _____

ASVAB study guide

Across

2. rock which has been changed by great heat and pressure
 3. the process of mixing different semiconductor atoms in order to control conductivity of the material
 6. a measurement of the distance from the equator
 14. what is located at 66.5 degrees north?
 15. what does cytosine pair with?
 16. another process by which eukaryotic cells reproduce
 17. study of planet earth

19. what is located at 23.5 degrees south?

20. genetic material

21. what does adenine pair with?

Down

1. what is located at 23.5 degrees north?

4. Current periodically reverses direction

5. a state of great commotion, confusion, or disturbance

7. naturally occurring inorganic solids with a definite chemical composition and rocks

8. study of rocks

9. two minerals with the same chemical composition, but different crystal structure

10. what is located at 66.5 degrees south?

11. what is earth if not perfectly sphered

12. Current that flows in one direction

13. what cell has a nucleus?

18. the process of neutralizing the charge of an object by removal of excess electrons to or donation of additional electrons by a much larger object
