

Name: _____

A Trip to the Zoo

Across

- 2. a cold-blooded, smooth-skinned vertebrate such as a frog or salamander that hatches from an egg with gills then transforms into an adult with air-breathing lungs
- 4. in peril or danger of extinction as a species
- 10. feeding on other animals; flesh-eating
- 11. performing most actions (feeding, breeding, etc.) at night
- 12. plant or animal species that no longer exists
- 13. feeding on a variety of different foodstuffs, both animal and vegetable
- 14. an animal which is hunted by other animals for food

15. an animal which must hunt other animals for food

17. the man-made habitat of an animal in captivity

18. the space within an animal's habitat that it actively defends

Down

1. a class of warm-blooded, usually hairy animals, that feed their young with milk secreted by the mammary glands of females

3. any action performed by a living thing; anything that an organism does involving an action or response to stimulation

5. the color and patterns of animals' skin, feathers, or fur which makes them harder to see when in their natural surroundings

6. a careful preservation and protection of something, especially planned management of a natural resource to prevent exploitation, destruction, or neglect

7. eating plants, leaves, and vegetation

8. a place that contains all the nutrients, water, shelter, and resources that an individual needs to survive; the place in which an animal or plant normally eats, drinks, sleeps, and moves around

9. the total conditions in which an organism exists (climate, terrain, food, light, presence of other living organisms)

16. the methods or characteristics a living thing has to protect itself
