

# Algebra 1 vocabulary

## Across

3. answer that is given when you add numbers together  
 5. substitute a number for each variable and perform the arithmetic operations  
 7. to multiply the same number three times  
 11. to find a solution  
 15. to reduce to a simpler form by cancellation of common factors, regrouping of terms in the same variable,  
 16. multiply a sum by multiplying each addend separately and then add the products

## Word Bank

product	coefficient.	constant	reciprocal	area
difference	simplify	quotient	solve	squared
evaluate	twice	expression	perimeter	formula
cubed	sum	distributive	opposite	

18. result of subtracting one number from another

19. a mathematical phrase that can contain ordinary numbers, variables and operators

## Down

1. an equation involving more than one variable  
 2. to multiply the same number twice  
 4. the number of unit squares that can be contained within it  
 6. the answer that you get after dividing one number by another  
 8. : A number used to multiply a variable

9. fraction flipped upside down

10. numbers that, when placed on a number line, are the exact same distance away from the 0

12. the answer when you multiply numbers together

13. two times as many

14. the total distance around the edge of the figure

17. a number on its own, or sometimes a letter
