

Algebra Terms

Across

4. A relationship that contains both direct and inverse variation
 6. The angle is the ray on the x-axis
 8. Opposite over Hypotenuse
 11. A unit of angle measure based on arc length
 14. A function whose graph has one or more gaps or breaks
 15. The reciprocal of cosine
 18. A reciprocal of the sine function
 19. Opposite over Adjacent

20. The other ray is called the _____ of the angle

Down

1. Adjacent over Hypotenuse
 2. A function whose graph has no gaps or breaks
 3. Contains a variable within a radical
 5. An angle is in _____ when its vertex is at the origin and one ray is on the positive x-axis
 7. Is a function whose rule is given by trigonometric ration
 9. Reciprocal of tangent

10. A _____ expression is a quotient of two polynomials.

12. Is formed by rotating the terminal side and keeping the initial side in place
 13. What is it called when a fraction contains one or more fraction in its numerator, its dominator, or both
 16. The _____ value is the weighted average of the possible outcomes
 17. The _____ circle
