

Algebra

Across

1. A mathematical sentence stating that the left side expression is equal to the right side expression.
 4. a mathematical sentence that contains an equal sign
 8. a quantity obtained as a result of a division equation
 11. the parts of an expression that are added or subtracted
 13. a quantity obtained as a result of a subtraction equation
 15. a relation where each number in the domain is paired with exactly one number in the range

17. the number that occurs most in a set of data
 18. the middle number in a set of numbers listed in numerical order
 19. a term that does contain a variable
 20. a quantity obtained as a result of a multiplication equation
- ## Down
2. a quantity obtained as a result of an addition equation
 3. the set of all x coordinates in each ordered pair
 5. a group of symbols that make a mathematical statement

6. The study of relationships between known and unknown values
 7. ordered pairs that identify points on a coordinate plane
 9. a term that does not contain a variable
 10. four regions into which a coordinate plane is divided by an x-axis and y-axis
 12. $3(2X-5)+1$
 14. the set of all y coordinates in each ordered pair
 16. the average of a set of numbers
