

Analysis and Design

Across

4. The features and functions that must be delivered by the system
7. A general description of the function of the software
8. Defines the extent of the software task
9. The major steps of the design
10. The limits that help define what is in the project and what is not

Down

1. Natural language-based design methodology
2. Design methodology used to graphically represent the steps required to solve a problem
3. The detailed break-down of the top level design
5. A list of deliverables that the project will hand over to the client
6. The information that must flow in or out from the sub-programs
