

Name: _____ Date: _____

Analysis and Design

1. A general description of the function of the software
 2. A list of deliverables that the project will hand over to the client
 3. The limits that help define what is in the project and what is not
 4. The features and functions that must be delivered by the system in terms of inputs, processes and outputs
 5. Defines the extent of the software task
 6. A natural language-based design methodology
 7. Design methodology used to graphically represent the steps of a problem
 8. The major steps of the design
 9. The information that must flow in or out from the sub-programs
 10. A detailed break-down of the top level design
- A. Pseudocode
 - B. Refinements
 - C. Data flow
 - D. Scope
 - E. Software Specification
 - F. Structured Diagram
 - G. Boundaries
 - H. Top level design
 - I. Purpose
 - J. Functional Requirements
