

Anatomy 101

Across

7. Produces two hormones
 10. Protects the kidneys
 13. Also known as suprarenal glands
 14. Speeds the transfer glucose from the blood the cells
 15. Microscopic, functioning part of the kidney

16. Site where all the vessels enter and exit the liver

Down

1. Has three parts: head, body, and tail
 2. Raise level of glucose in bloodstream
 3. Antibody producing cells
 4. Fold of parietal peritoneum that separates the lobes of the liver

5. Originates at the abdominal aorta

6. Tumor of the adrenal medulla

8. Disease of the liver

9. Pancreatic islet clusters

11. Pair of retroperitoneal organs that extend from T12 to L3

12. Located between the fundus of the stomach and the diaphragm
