

Angles

Across

2. Lines in the same plane that never intersect.

5. _____ angle that adds up to 180 degrees.

7. _____ angles are formed by two lines intersecting that are opposite from each other.

10. _____ angle is more than 90 degrees.

12. _____ angles are a pair of angles that are on the same side of the transversal.

Down

1. _____ angles are a pair of angles in the exterior that are diagonally across from each other.

3. _____ angles are an angle pair in the interior that are diagonally across the transversal from each other.

4. _____ angles are a pair of angles where each is in the same location relative to each parallel line.

6. _____ angles are two or more angles that add up to 90 degrees.

8. _____ angle that is less than 90 degrees.

9. A line that crosses at least two other lines.

11. _____ angle is exactly 90 degrees.
