

Animalia

Across

3. no body cavity but have solid bodies are
 4. opening in the gastrula formed when blastula folds in
 7. larva of cnidarians
 9. asexual reproduction in which an outgrowth on the parent organism breaks off to form a new individual
 13. arrangement of body parts around a central plane or axis
 14. attached and non-moving
 17. forms mouth first
 19. which phylum has the simplest skeletons

20. lacks cell walls and comes in a variety of shapes

21. a head with sensory organs concentrated there

24. larva of a mollusca

25. provides energy for movement

26. outer germ layer

27. cluster of nerve cells

28. third germ layer

29. found in arthropods, covers the outside of the body, limits size

30. all animals are

Down

1. belly or lower surface

2. fluid-filled body cavity surrounded by muscles

5. internal body cavity lined with mesoderm

6. able to move around

8. contains the greatest number of animal species

10. body cavity only partially lined with mesoderm

11. fertilized egg

12. most have backbones

15. found in all vertebrates, inside their bodies, made of cartilage or bone

16. forms anus first

18. larva of echinoderms

22. inner germ layer

23. occurs when the body cant be divided into smaller sections
