

Approaches

Across

3. The scientific study of brain structure and mental processes
 4. This neuron passes information between CNS and muscles
 5. The hormone released by a gland to increase metabolism
 7. To slow down the firing of a neuron and make it less likely to pass on the electrical impulse
 9. SLT is a bridge between Behaviourism and what theory?
 12. The observable characteristics of a person
 13. What type of conditioning is learning by association?

14. Behaviourists study behaviour as it is what?

16. Self actualisation means reaching your what?
 18. A defense mechanism which means taking out your anger on a substitute object
 19. A type of reinforcement that you see happen to the model
 20. The sympathetic and parasympathetic are part of this nervous system
 21. An example of behaviour explained by evolution

Down

1. Chemicals that diffuse across the synapse

2. SLT believe you need to have the ability to imitate a person.

6. What method did Wundt use to understand the conscious mind?
 8. This approach believes behaviour is due to nature only
 10. What criticism is made of Wundt's method?
 11. The sympathetic NS does this to pupils
 15. Blocks of knowledge gained through experience
 17. The thought processes that produce a response
