

Association and Memory after a TBI

Across

1. whose value depends on that of another
2. move functions damaged area of brain to other undamaged areas
4. making observations, gathering data, forming theories
12. temporary storage of information
14. descriptive research of a person, group, or phenomenon
15. Individual awareness thoughts, memories, feelings, sensations, and environment?
16. behavior controlled consequences
17. storage of information for extended period of time
18. LTM different skills, operations, actions

20. learned process 2 stimuli repeatedly paired
 21. person's unique memory of a specific event
 22. objective analysis and evaluation of an issue in order to form a judgment
 23. figure out which variables connected
- ## Down
3. drawn from a population of interest and has demographics and characteristics match population in as many way possible
 5. investigation in which a hypothesis is scientifically tested
 6. 2 variables in which 1 variable increases as the other decreases
 7. relationship between 2 variables which both variables move in tandem

8. self-report data from study participant
9. brain's ability to change, adapt as a result of experience
10. participants who do not receive the experimental treatment
11. group stands and equal chance of being chosen as a participant in the study
13. study processing, conceptual resources, perceptual skill, language learning, other aspects of brain
19. study mental processes- attention, language use, memory, perception, problem solving, creativity, thinking
