

Atomic Theory People

Across

2. Quantum Equilibrium Hypothesis; Wave function

3. Theory proposed all matter was composed of atoms

4. Unknown radiation was produced when alpha particles were bombarded with Beryllium atoms

6. Made his theory from the X-ray Spectra

8. Oil drop experiment quantified the charge of an electron

9. Theory stated that the universe is composed of two elements; Atoms and the void which they exist/move in

10. Gold-foil experiment; Atom has a tiny, heavy nucleus

Down

1. Used math equations to describe finding an electron in a certain position

5. Theory came from cathode rays being negatively charged

7. Theory where the hydrogen atom consists a proton as a nucleus
