

Atoms revision

Across

2. What part of the atom would you find neutrons?

6. Which part of the atom is negatively charged?

7. What is the least reactive Group 1 metal?

10. What is another name for Group 7?

11. How many electrons do group 8 have in their outer shell?

12. What is the maximum number of electrons the first shell can hold?

Down

1. What is another name for Group 1?

3. Which element has the electron configuration 2,6?

4. What charge do protons have?

5. What is the reaction called when a more reactive halogen "replaces" a less reactive halide?

8. What is it called when a metal can bend without breaking?

9. Which element has the electron configuration 2,8,8,2?
