BACK TO BASICS

Across

- 3. part of a line that is bounded by two distinct end points
- 7. 180° degrees angle
- 8. a part of a line that begins at a particular endpoint and extends endlessly in one direction
- 10. Its represented by a shape that looks like a floor or wall and has two dimensions

- 11. it extends without end, and has one dimension
 - 13. two points marking the end of a line segment
 - 14. angle less than 90° degrees
- ## Down
- 1. angle with more than 90° degrees
 - 2. ray that divides an angle into two and makes them congruent

- 4. it is represented by a dot and has NO dimension
- 5. angle with exactly 90° degrees
- 6. the end point of the angle
- 9. the rays of the angle
- 12. two different rays with the same endpoint
