# Biochemical tests

## Across

- 5. measurement of gamma glutamyl transferase (GGT) is important in
- 6. enzyme measured in obstructive jaundice
- 9. Hyperuricemia is seen in
- 10. this test is a sensitive indicator of renal failure
- 11. This is measured in serum of patients with edema

- 12. Hypercholesterolemia is seen this renal condition
- 13. paradoxical aciduria is seen in

## Down

- 1. Serum amylase and lipase measurements are useful in diagnosing
- 2. elevated serum levels of TSH (thyroid stimulating hormone ) is seen in

- 3. the enzyme used in the quantitative estimation of glucose
- 4. the serum appears lipemic due to the presence of
- 7. This protein is measured in myocardial infarction which appears to be the sensitive marker
- 8. Heat and acetic acid test in urine detects
