

# Biochemistry

## Across

9. The ability to resist an external force “skin“ on the surface of water
10. What is a monomer of Lipids
11. What is made of Amino Acids
12. Contains genetic material and are involved with protein synthesis

## Down

1. Mutation in the DNA sequence change how protein unfolds
2. Biological catalyst for cellular reactions, acts on a substrate and the products produced
3. Unequal distribution of charge, slightly and slightly negative

4. Breaking apart macromolecules into their monomers by adding H<sub>2</sub>O
5. What is a giant molecule made of many smaller molecules linked together called monomers.
6. What’s a primary function of carbohydrates
7. What is a polar molecule?
8. What’s altered from it’s original state
