# Biodiversity

## Across

2. Species that is considered likely to be endangered soon
3. sampling equipment used to catch insects in long grass areas
6. The transfer of alleles between two populations
8. The name of a process also known as survival of the fittest
11. Species that is in danger of extinction
12. The number of different habitats found within an area.
14. sampling method which includes kicking a river bank, used to study organisms in a river
16. Non living conditions in a habitat

17. A reason for maintaining biodiversity to do with enrichment of life

19. Type of conservation out of the natural habitat
20. Taking measurements of a limited number of individual organisms present in a particular area
21. Method of preservation and careful management of an environment and natural resources.

## Down

1. Type of sampling where populations are divided into strata, based on particular characteristics
4. sampling equipment which requires the sucking of a mouth piece to draw in insects

5. comparison if the numbers of individuals of a species living in a community
7. The number of different species living in a particular area
9. Type of sampling method-selecting individuals by chance
10. Piece of equipment used to sample plants
13. Type of conservation within the natural habitat
15. Type of biodiversity that refers to variety of genes that make up a species
18. No organisms of that species exists anywhere in the world
