

Name: _____ Date: _____

Biology -The Cell Matching Exercise 2

- | | |
|--|---------------------------------|
| 1. green structure in plant that turns sunlight into energy | A. mitochondria |
| 2. Nucleus ,ribosomes and lysosomes in the cell are examples of these | B. photosynthesis |
| 3. The cell gets its energy from this powerhouse | C. cell wall |
| 4. Brain of the cell is called the | D. nucleus |
| 5. grouped cells of the same kind form these | E. nucleus |
| 6. outer boundary of cell | F. organelles |
| 7. When a cell reproduces it uses this type of cell division | G. eukaryotic |
| 8. gets rid of waste in the cell | H. Meiosis cell division |
| 9. the types of cells that make up plants and animals | I. tissues |
| 10. Prokaryotic cells do not have a | J. lysosomes |
