

# C5L2 Adaption and Extinction

**Across**

- 4. coloring that blends with the environment
- 5. when one species(the mimic) looks like another species (the model) in order to deceive a predator
- 7. physical traits of the body that help organisms survive and reproduce
- 8. when all the individuals of a species dies off
- 9. when humans introduce a new species to environments

- 10. humans and natural disasters have destroyed an organisms habitat

**Down**

- 1. the less genetic variations
- 2. patterns of actions(instincts) that help organisms survive and reproduce
- 3. when a species does not have any members with genetic traits that allow survival
- 6. inherited traits that increase the chance of survival and reproduction of an organism
