

C6L2 Biological Evidence

Across

- 3. What term is defined as parts of organisms that are similar in origin and structure?
- 4. Which type of diagram shows evolutionary relationship?
- 6. What is it called when species inherit many of the same genes from a common ancestor and then scientists go ahead and decode the DNA?
- 7. What is the study of growth and development of offspring from fertilization to birth called?
- 8. What term is defined as all the known fossils and their place in time?

- 9. What term is defined as parts that looks similar but are passed down from different ancestors?
- 10. What is the science term that is defined as genetic change in a population over time?

Down

- 1. What term is defined as body parts that have no function in their present day form?
- 2. What is the study of similarities and differences in the physical structures of living things?
- 5. What science term is defined as any person to whom two or more persons claim descent?
