

CHAPTER 6

Across

1. The chemical process that takes place in living organisms in which cells are nourished and carry out their activities.
 5. The study of the structures of the human body that can be seen by the naked eye.
 7. The muscle extending along side of the neck, from the ear to the clavicle.
 9. Also known as microscopic anatomy, this is the study of the tiny structures found in living tissue

10. Where we can find the thalamus and the hypothalamus.

11. The hindmost bone of the skull

13. This forms the physical foundation for the body

14. The smallest and most fragile bones of the face, situated at the front inside part of the eye socket.

Down

2. The study of the functions and activities performed by the body structures.

3. The point where two or more bones meet.

4. The part of the muscle which is the movable attachment and farthest away from the skeleton.

6. This gives a smoothness and contour to the body

8. The bones in the fingers, three in each finger, one in each thumb.

12. The bone that is also known as the collarbone.
