# Carbon Footprint Vocabulary

- |   |                          |
|---|--------------------------|
| 1. Something that a country has and can use to increase its wealth.   | A. CO2 Emissions         |
| 2. The presence of toxic chemicals or compounds (including those of biological origin) in the air, at levels that pose a health risk.   | B. Carbon Footprint      |
| 3. Materials from nature used to make our lives easier and for economic gain.   | C. Respiratory Illnesses |
| 4. The ability to be used without being completely used up or destroyed.  | D. Contamination         |
| 5. A fog made heavier and darker by smoke and chemical fumes.   | E. Sustainability        |
| 6. Any of the atmospheric gases that contribute to the green house effect.  | F. Greenhouse Gases      |
| 7. The process of making something dirty, polluted, or poisonous by adding a chemical, waste, or infection.   | G. Smog                  |
| 8. The amount of greenhouse gases, specifically carbon dioxide emitted by something such as a persons activities, or a products manufacture ad transport during a given period. | H. Biodiversity          |
| 9. Biological diversity in and environment as indicated by numbers of different species of plants and animals.  | I. Deforestation         |
| 10. The cutting down of trees in a large area, or the destruction of forest by people.  | J. Resources             |
| 11. A colorless, odorless and non-poisonous gas formed by combustion of carbon and in the respiration of living organism and considered a greenhouse gas.                       | K. Air Pollution         |
| 12. Any of the diseases and disorders of the airways and the lungs that affect human respiration.   | L. Natural Resources     |
