Cardiac Med/Surg Review

1. Pulse site
 2. Arrhythmia is a pulse that is
 3. Cause of hypertension
 4. Complication of Rheumatic fever
 5. With age the blood pressure usually
 6. Low volume of erythrocytes results in
 7. Another name for arteriosclerosis obliterans is
 8. Digest microorganisms and cellular debris
 9. Serum cardiac markers
 10. Monitors oxygenation & acid-base balance
 11. Fall in BP upon rising from lying down
 12. Inflammation of the heart muscle
 13. Weakness of the heart muscle
 14. Inflammation & occlusion of small to medium sized arteries
 15. Irregular, purposeless contraction of heart muscle
 16. Respirations below 16 BPM
 17. Deprivation of O₂ to an organ or muscle
 18. Heart rate above 100 BPM
 19. Deprivation of O₂ in the heart muscle
 20. Blood pressure above 140/90
 21. Respirations above 20 BPM
 22. Heart rate below 60 BPM
 23. Thickening, loss of elasticity & calcification of arterial walls
 24. Can be the result of ineffective treatment of infection
 25. Plaque in arteries
- A. Rises
 - B. Tachypnea
 - C. Intermittent claudication
 - D. Ischemia
 - E. Phagocytosis
 - F. Proteins
 - G. Bradycardia
 - H. Myocarditis
 - I. Orthostatic hypotension
 - J. Atherosclerosis
 - K. Bacterial endocarditis
 - L. Rheumatic fever
 - M. Unknown
 - N. Bradypnea
 - O. Cardiomyopathy
 - P. Angina pectoris
 - Q. Hypertension
 - R. Arteriosclerosis
 - S. Arterial blood gases
 - T. Irregular
 - U. Anemia
 - V. Burger's disease
 - W. Apical
 - X. Tachycardia
 - Y. Ventricular fibrillation
