

Cardiovascular Nursing

Across

2. Medication to maintain stent patency by decreasing platelet aggregation
 6. Lab drawn to assess for cardiac ischemia
 8. Another word for chest pain
 10. Term for difficulty with breathing
 14. Should have a daily restriction in severe heart failure
 15. Test used to measure EF
 16. Nursing goal for heart failure patients
 17. Artery leaving the left ventricle to deliver blood to body
 21. Should be consumed in a decreased amount with cardiovascular disease
 23. Pain reliever for chest pain & dyspnea

25. Major contributor to CAD that can be managed with diet
 26. Prescribed to alleviate dyspnea and hypoxia

Down

1. Medication that slows HR and decreases BP
 3. Test used to assess coronary vessels for atherosclerosis
 4. Medication that is taken in low dose to decrease platelet aggregation
 5. Quality of blood leaving the right ventricle
 7. Lab drawn to measure degree of heart failure
 9. Medication used for rapid relief of chest pain
 11. Collection of fluid in lung
 12. Fluid retained in legs or pleura

13. Diagnosed when EF <40%
 18. Test to evaluate fluid status in lungs
 19. A cause of cardiomyopathy
 20. Lab drawn to assess for end-organ damage
 22. Medication class used to decrease lipids
 24. Valve between left atrium & ventricle
