

Name: _____ Date: _____

Cardiovascular System

1. A network of arteries, veins, and capillaries move blood throughout the body, providing cells with oxygen and nutrients and removing waste.
 2. Delivers oxygen, hormones, and nutrients to the cells.
 3. The oxygen- carrying protein in blood.
 4. The blood vessels that carry blood away from the heart.
 5. Blood vessels that return blood to the heart.
 6. These form if valves in the veins do not close tight enough to prevent back flow of blood.
 7. Small vessels that carry blood between arterioles and vessels called venules.
 8. Cells that prevent the body's loss of blood.
 9. The fluid in which other parts of the blood are suspended.
 10. Protects body against infections.
- A. Platelets
 - B. White blood cells
 - C. Hemoglobin
 - D. Cardiovascular system
 - E. Arteries
 - F. Plasma
 - G. Blood
 - H. Capillaries
 - I. Varicose veins
 - J. Veins
