

Name: _____

Date: _____

Cell

Across

- 3. Cellular organelle that packages and sorts proteins.
- 6. A membrane bound vesicle in cytoplasm.
- 8. The membrane bound compartment inside chloroplast.
- 9. A structure that preforms specific functions within the cell.
- 11. Break down fatty acids and transfer hydrogen to oxygen.
- 13. The material or protoplasm within a living cell.
- 14. The main microtubule organizing center.

16. Network of protein filaments and tubules in the cytoplasm.

17. Fibrous rods that help shape the cell.

19. A small dense spherical structure in the nucleus.

20. Membrane bounded organelle that contains genetic material.

Down

1. The colorless fluid surrounding grana.

2. Controls the production of proteins.

4. Organelles involved in digestion and waste removal.

5. Uses plasma membrane to engulf a large particle.

7. Actively transport molecules by engulfing in the cell.

10. Stack of thylakoids within the chloroplast of plant cells.

12. Ingestion of liquid into a cell.

15. A membrane of a cell that forms external to the cell membrane.

18. A basic structure that is the smallest unit of life.
