

Cell Membrane

Across

2. function in cell division

6. break down waste-suicide sac

8. "soup" that contains molecules and organelles

10. provides structure/protection for cell

11. A thin membrane that surrounds the nucleus

13. where lipids only are formed

14. where photosynthesis occurs

15. where DNA is packaged

Down

1. powerhouse/ site of cellular respiration

3. where protein synthesis occurs

4. controls what goes in and out of cell

5. holds genetic information/ controls cell

7. used for storage

9. packaging and storing materials from ER

12. where lipids/proteins are formed

Word Bank

mitochondria

ribosomes

lysosome

nuclear membrane

golgi

cell membrane

cytoplasm

centrioles

smooth ER

cell nucleus

vacuole

rough ER

chloroplast

chromosomes

cell wall
