

# Cell Organelles

## Across

- 3. protein synthesis
- 5. help divide DNA
- 6. controls cellular activities
- 8. system of membranes to move proteins through the cell, no ribosomes
- 10. system of membranes to move proteins through the cell, with ribosomes

- 11. a slender threadlike structure
- 12. store water or minerals
- 13. filled with digestive enzymes
- 14. moves in waves
- 15. converts sunlight into glucose

## Down

- 1. sac-like membrane where proteins are packed stores or shipped
- 2. All cells have these
- 4. glucose is converted to energy (ATP)
- 7. material or protoplasm within a living cell
- 9. provides support only plants cells
