

Name: _____

Date: _____

Cell Structure

Across

- 2. directs all cell activity
- 3. organelles that package cellular materials and transports them within the cell or out of the cell
- 8. structure in the cytoplasm of a eukaryotic cell that can act as a storage site
- 9. The protective layer around all cells
- 10. proteins

- 11. green, chlorophyll-containing, plant cell organelle that converts sunlight

- 12. Organelles where energy is released from breaking down food into carbon dioxide and water

Down

- 1. cytoplasmic organelle that moves materials around in a cell and is made up of complex series of folded membranes

- 4. group of similar cells that work together to do one job

- 5. Gealtinlike substance that fills cells

- 6. covered in ribosomes

- 7. Tough, rigid outer coverings that protect the cell and give it shape
