

Cell Transport

Across

3. molecules other than water

4. dissolved solids like salt

6. direction of water flow determined by % water inside and outside the cell

7. 100% water

9. movement of particles high to low

12. water moves into the cell

Down

1. regulates pH

2. movement of particles low to high

5. a balance that cells maintain by controlling what enters and exits

8. H₂O

10. water moves out of the cell

11. NaCl
