

Cell structures

Across

3. a minute particle where protein is made consisting of RNA

10. a network of membranous tubes involved in protein and lipid synthesis

11. any of the distinct types of material of specialized cells

12. containing enzymes and digest food

13. A space or vesicle within the cytoplasm containing fluids

14. where photosynthesis takes place

15. an individual animal, plant, or single celled life form

Down

1. a jelly like substance

2. where cellular respiration takes place

4. any of a number of organized structures within a living cell

5. a substance that provides nourishment essential for life

6. the semipermeable membrane surrounding the cytoplasm of a cell

7. a organelle that acts as the brain of the cell and is in eukaryotic cells

8. a organelle made up of membrane bound sacs

9. the smallest structural functional unit of an organism
