

# Cells Crossword Puzzle

## Across

5. transports materials through the cell

7. round organelles surrounded by a membrane & the digestion of the cell takes place here

8. controls the functions of the cells

10. flattened, layered sac-like organelles that packages proteins & carbohydrates into vesicles for "export" from the cell

## Word Bank

ribosomes

nucleus

multicellular

vacuole

11. the thin layer of protein and fat that surrounds the cell

12. fluid-filled membrane & it fills with food being digested and waste material that is on its way out of the cell

## Down

1. a chlorophyll-containing organelles found in algal and green plant cells

2. more than one cell

3. rod-shaped organelles and it converts the energy stored in glucose into energy for the cell

4. small organelles that are sites of protein synthesis

6. the jellylike material outside the cell nucleus in which the organelles are located

9. one cell

cell membrane

golgi bodies

lysosomes

chloroplasts

mitochondrion

endoplasmic reticulum

unicellular

cytoplasm
