

Cellular Transport and Transport in Plants

Across

- 2. the thinner the tubes the ----- liquid rises
- 3. ----- cells control the size of the stomate
- 5. ----- tubes carry water up in a plant
- 7. passive transport is also known as
- 8. ----- is when water molecules attach to the sides of the container
- 14. ----- is when water molecules stick together

- 15. what is it called when after a rainstorm there is more water in the soil then the roots

Down

- 1. ----- transport, goes from high to low
- 4. cells shrink in salt water is called
- 6. how many water theories are there for water movement in a plant
- 9. when you put a cell in salt water it will -----

- 10. when talking about passive transport and water it is called

- 11. when you put a cell in pure distilled water it will -----
- 12. on rainy days the guard cells -----
- 13. ----- transport requires extra energy
