

Cellular Processes

Across

3. what is the biggest limiting factor of photosynthesis

4. solution inside the thylakoid

8. when oxygen is not present in cellular respiration

9. photosynthesis prospers under what color light

10. able to make energy from chemicals

12. process occurs in the stroma

13. able to make energy from light energy

14. chemical energy is stored in

15. cellular respiration mostly occurs in the

16. converts glucose to pyruvic acid

Down

1. get energy from food; cannot make energy

2. stacks of thylakoids

5. breaks pyruvic acid into a 2-carbon compound

6. where does photosynthesis take place

7. compounds that absorb light

11. flattened discs where the light dependent reactions occur
