

Cellular Respiration

Across

1. Another essential for life process?
3. A difference between plant and animal cells.
8. What acid is made as a waste product of anaerobic respiration?
9. One type of cellular respiration combines glucose with oxygen. It is called _____ respiration.
11. The _____ holds genetic code for enzymes involved in respiration.

12. What does the 'P' in ATP stand for?

13. ATP is a _____ store of energy.

14. A process which is essential for life that cellular respiration is needed for?

15. The _____ is where enzymes are made and is the location of reactions in anaerobic respiration.

Down

2. A waste product of aerobic respiration?

4. Cellular respiration is an _____ process.

5. What is cellular respiration that doesn't require oxygen called?

6. ATP is a _____ store of energy.

7. Some of the reactions take place in organelles called _____

10. Another type of cellular respiration does not require _____
