

Chapter 13 vocab l

Across

2. Change in the relative frequencies of alleles in a population over a number of generations
3. Remnants of features that served important functions in organisms ancestors
5. Contribution an individual makes to the gene pool of the next generation

7. When a population may gain or lose alleles when fertile individuals move in and out of a population
8. Similarity resulting from common ancestry
9. Humans have modified species through selective breeding
10. Leads to a loss of genetic diversity when a population is greatly reduced

11. The idea that living species are descendants of ancestral species were different from present day ones

12. Chronicle of evolution over million of years

Down

1. Group of individuals of the same species
4. Consists of all copies of every type of allele
6. Changes in the nucleotide sequence of DNA
