

Chapter 14 Vocav

Across

1. Population size will increase at a rapid pace.
3. Two organisms from different species compete for limited resources
4. Organisms of the same species compete with one another for the limited resources
7. Generalized diagram showing the number of surviving members over a time from measured set of births
8. A man comes into another country to settle down permanently. This is an example of one of the four things that affect population.
10. There is one house for sale. There is _____ between two people to buy the house
11. A dog dies. This is an example of one of the four things that affect population.
12. Tokyo has a _____ of 6,158 persons per square kilometer, which is the measurement of the number of individuals in a defined space.

14. Mutualism, Commensalism and Parasitism are apart of this

17. Factor that plays a major role in limiting a species number
18. All biotic and abiotic factors in an area where an organism lives
20. A man LEAVES his country to live in another country
21. A tapeworm lives inside a person. It feeds to the detriment of the person.
22. Population grows slowly, having a period of exponential growth before leveling off at a stable size

Down

2. First organisms that live in an previously uninhabited area
5. A man gets a ride from a friend to his house. The man benefits while the friend is not hurt in any other way.

6. The max number of a species that can be sustained by the region while living comfortably
9. A hawk kills, and eats, a rabbit. The hawk captured and fed upon the rabbit.
13. Composed of all physical, chemical and biological factors an organism needs to survive, stay healthy and reproduce
15. A clown fish lives in a sea anemone. Both organisms benefit.
16. Biotic changes that will regenerate a damaged community or start life in an previously uninhabited area
19. One of the four things that affect population density about giving birth to new organisms
