

Chapter 5 Earth's Energy and Mineral Resources

Across

1. This is produced from atomic reactions

4. Using old materials to make new ones is this.

5. Coal, oil, and natural gas are examples

7. A rock that contains at least 50% plant remains

10. Electricity made from using the power of water

11. This is derived from burning organic material.

12. Place where electricity is made using large windmills

13. Energy obtained by using hot magma inside Earth

Down

2. A deposit of useful minerals

3. Energy from the sun

6. Thick black liquid formed from the buried remains of microscopic organisms.

8. Mineral deposits that can be mined for a profit.

9. The amount of a fossil fuel that can be extracted at a profit is called this
