

Chapter 6

Across

- 4. Rock made up of different types of sediment
- 5. The Process in which minerals precipitate into pore spaces between sediment grains
- 7. Sedimentary rock that forms from the Remains of plants and animals
- 9. The series of processes in which rocks form
- 10. The rock texture in which minerals are not arranged in planes or bands

Down

- 1. The rock texture in which mineral grains are arranged in planes or bands
- 2. The process in which the volume and porosity of a sediment is decreased by the weight of overlying sediments
- 3. The process of one rock changing into metamorphic rock
- 6. Rock that is formed by metamorphism
- 8. Rod know that forms when magma cools and solidifies
