# Chapter 8 Vocab Review

## Across

- 3. The time between deciding to seek treatment and actually doing so
- 7. The act of delaying seeking treatment for recognized symptoms
- 8. An organized set of beliefs about an illness or a type of illness, including its nature, cause, duration, and consequences
- 9. The relabeling of systems of fatigue and exhaustion as a particular illness resulting from learning about that illness
- 10. A model maintaining that people hold implicit commonsense beliefs about their symptoms and illnesses that result in organized illness representations or schemas and that influence their treatment decisions and adherence

## Down

- 1. An informal network of family and friends who help an individual interpret and treat a disorder before the individual seeks formal medical treatment
- 2. The time between recognizing that a symptom exists and deciding that it is serious
- 4. The time between recognizing that a symptom implies an illness and the decision to seek treatment
- 5. A delay in treating symptoms, which results from problems within the medical system, such as faulty diagnoses or lost test results
- 6. Benefits of being treated for illness, including the ability to rest, to be freed from unpleasant tasks, and to be taken care of by others

## Word Bank

- |                              |                           |                  |
|------------------------------|---------------------------|------------------|
| commonsense model of illness | illness representations   | secondary gains  |
| medical delay                | medical students' disease | behavioral delay |
| lay referral network         | delay behavior            | illness delay    |
| appraisal delay              |                           |                  |
