

Chemistry and Energy Vocabulary

Across

5. property of metal and alloys that allow heat or electricity charges to pass through the material easily
6. change that doesn't alter the identity of a substance
8. materials present at the end of a reaction
9. The smallest physical unit of a substance that can exist independently, consisting of one or more atoms held together by chemical forces
10. Cannot be physically broken down or separated into a simpler form

Down

1. A mixture that is not mixed evenly
2. the ability of an atom or molecule to undergo a chemical reaction with another atom, molecule or compound
3. To decrease seriously or to exhaust the abundance of supply
4. an element is stable when there are 8 electrons on the outer ring
7. Solid, liquid or gas that contains two or more substances blended evenly trough
