

Choice Board Project

Across

- 2.** parent organism produces spores: single cells that can develop into new individuals by repeated mitosis
- 7.** two parents that combine their genetic material to produce a new organism, which differs from both parents
- 8.** also called ovum; female gamete
- 10.** A form of asexual reproduction in which plants produce genetically identical offshoots (clones) of themselves, which then develop into independent plants.
- 11.** action or process of fertilizing an egg, female animal, or plant, involving the fusion of male and female gametes to form a zygote.

Down

- 1.** male gamete
- 3.** only one parent and produces offspring that are identical to the parent.
- 4.** Asexual reproduction in which a part of the parent organism pinches off and forms a new organism
- 5.** fertilized egg
- 6.** form of asexual reproduction in which one cell divides to form two identical cells
- 9.** reproductive cells
