

Circle Vocabulary

Across

2. The point where a tangent line touches the circle.
 3. A line segment whose endpoints are on a circle.
 7. A line that intersects a circle at exactly one point.
 9. The set of all points equidistant from a center point.

10. A segment that intersects a circle at two points, with one point as the endpoint of the segment.

12. An arc whose endpoints are the endpoint of a diameter of the circle.

13. Geometric figures that meet at right angles.

Down

1. The arc of a circle that is created by the intersection of an angle or line.

4. The longest chord of a circle.

5. An angle whose vertex is the center of the circle and that intersects the circle in two places.

6. The distance from the center of a circle to the circle.

8. An angle whose vertex is on the circle and that intersects the circle at two places.

11. A line that intersects a circle at two points.
